

ECLARE VERSION 2012 PROGRAM UPDATES

Note: Program build/version numbers and/or dates are not necessarily consecutive.

BUILD #	REL DATE	DESCRIPTION
2012.00	21 Sep 11	"Gold" version released for shipment.
2012.01	28 Nov 11	Reports: Corrected report "Cost" on the Management Job Gross Margin report to use Model Cost if it is non-zero. Otherwise, use Master Option Cost.
2012.05	5 Jan 12	File: Added the ability to use an alternate file dialog/navigation window when opening/saving files because some users were experiencing program problems when they selected an option that called a Windows [®] file dialog window. The option is enabled/disabled by a new checkbox option (Use Prosoft alternate File Dialog control) on the File Supervisor Configuration Additional tab. <small>Windows is a registered trademark of the Microsoft Corporation.</small>
2012.07	19 Mar 12	Maintenance: Added an additional test, which is only active in the Change mode, which disables the Item Number field when the Master File Change option is selected and the Item Number is currently referenced in Take Off Detail. 1. If an attempt is made to change the Item Number (or one or more of its <i>record fields</i>) and it is referenced, the Number field will be disabled ("grayed out") and a message, Item # is referenced and may not be changed , will appear to the right of the field. 2. A final Number status check will be made when a user changes an Item Number record field and selects OK to save the record. If the Number reference status has changed while the record is being updated by the user, an information message will be displayed and the Item Number will be returned to its original value (i.e., the save will be cancelled).
