

Vendor/Sub Exception Copy

Program(s): Eclare Software Report: 4744

Maintenance | Setup Maintenance | Product Group Exception | Vendors
Maintenance | Setup Maintenance | Product Group Exception | Vendors | Copy Marked

Added "Copy Marked Exceptions" options under the Vendors function which will copy marked product groups "List Vendor" exceptions to other marked Exception Groups selected by the user. When a "Change" is made and accepted, that line will be marked even if nothing was actually changed as long as OK is selected on the Change popup window.

Added a new window that supports the "Copy Marked Exceptions" from the Product Group Exception browser. The selected Product Groups from the previous window will be copied and will overwrite the corresponding Product Group Exception list. This includes any blank vendor selection, thus resetting to default value.

Global Job Delete

Program(s): Eclare Software Report: 4757

Maintenance | Global Job Maintenance | Tag Delete Jobs

Added a new "Quick Tag" button which allows users to mark jobs based on Last Retail Price date, Job/Model and Job Number prefix exclusion. This only marks jobs, leaving the user the ability to review and correct before deleting.

Hide Company on Company Selection Window

Program(s): PSClient, Eclare, Gemini Software Report: 4770

File | Supervisor | Company Maintenance | Insert/Change

Added a new "Hide Company" checkbox on the Company Maintenance window which can be used to mark a company as "hidden" on the Select Company window during login. A new "Show Hidden Company" checkbox has been added to the Select Company window (which appears during login). When checked, all companies marked as "hidden" will appear on the Select Company window.

Windows Registry Settings and Microsoft Security Essentials Check *

Program(s): PSClient, Eclare, Gemini Software Report: 4780

Updated Eclare, Gemini, and PSClient program initialization to:

- a. Check Windows Registry Opportunistic File Locking settings and, if settings are incorrect, to update them.
- b. Check to see if Microsoft Security Essentials is active. If it is active and does not have .TPS files excluded, to show a warning message but allow program initialization to continue.

* Windows and Microsoft are either registered trademarks or trademarks of the Microsoft Corporation. Microsoft Security Essentials is copyrighted by the Microsoft Corporation.

Why the above changes?

a. Opportunistic File Locking (OPL) - Microsoft has reported that if OPL is turned on that there are cases where the system does not properly update the different buffers (details within a file) in all cases which can cause data loss. We have added a change to the system that verifies the settings and updates the OPL settings if not correct.

b. Microsoft Security Essentials (MSE) - All virus checking/protection software checks files for issues. The process of checking slows systems down and could cause failure (timeouts) resulting in the program not responding. MSE has been reported to cause issues on database files. MSE is being used by a large number of users (due to it being free). We are able to determine if TPS files have been excluded in MSE and give a warning until the correction has been made. As a side note, it is recommended that TPS files also be excluded from being checked in other virus checking programs.
